Revision History

Version number	*Date*	*Originator*	*Reason for change*	*High level description of changes*
1.0	10/06/2020	David Rademacher	Initial draft	
1.1	10/22/2020	David Rademacher	Increment 2 complete	

TABLE OF CONTENTS

1. Introduction and Project Overview

We aim to create a fun and expansive application for Android by the name of SketchApp. The full specifications of the application will be explained in this document, but in a high-level sense we will create an environment for users to converse with each other and share images and drawings as well as allow users to create drawings using our tool. The app will be easy to use and will be a more relaxed social platform for our users. In addition to the requirements listed in this document, we are open to adding more features as our user base requests them. The project will be completed and presented by December 8th of 2020.

2. Objectives

2.1 BUSINESS OBJECTIVES

The following is a list of business objectives:

Objective 1:

• **User Registration:** Users must provide personal information in order to access and view the system. The personal information requested will be:

- Username
- Password
  - Minimum 8 Characters, 1 Capital Letter, 1 Number.
- First Name, Last Name
- E-mail address
- Phone Number (Optional)
- Age (Important!)

Objective 1a:

• **Category Selection:** Part of the user registration process will be to follow certain categories of Animals (categories are subject to change):

Initial categories:

- Dogs
- Cats
- Horses
- Birds
- Dolphins

Objective 2:

• **Login:** Users must login using username and password provided during customer registration.

Objective 3:

• **Feed:** After login users will be directed to their "feed," a section of the app that shows images scrapped from Reddit, as well as images drawn by friends.

- Allows users to view "real" pictures of followed animals.
- Allows users to see pictures drawn by friends.
- Allows users can like posts.
- Allows users to select post.

Objective 4:

• **Posts:** In the feed users will be allowed to select posts, and view comments, like or report.

- Users will click post, which will open post from feed and take over the view board.
- User can then like, comment (undecided), or report post.
    - Report post if post is not appropriate, or tagged incorrectly.

Objective 5:

• **Draw:** User will then be allowed to draw a post, where the app will try to guess what they are drawing as they draw.

- User is prompted to drawing board.
- User has a color pallet as well as an eraser.
- User has option to clear the board.
- Submit and Cancel buttons available.
- If submitted the drawing is processes through the neural network, and the category is determined. User is asked to confirm category.
    - Once category is confirmed drawing is posted to users feed.

Objective 6:

• **User Homepage:** In the Users homepage, the user will have the option to see all posts made by user. As well as see the posts that the user has liked.

- See owned posts.
- Delete Post.
- See liked posts.
- Change followed Categories.
- Discover New Categories.

Object 7:

• **Settings:** User will have the ability to control color scheme of app, change post view settings, and delete user account.

- User can change color scheme of SketchApp.
- User can change types of posts seen.
    - Only drawn posts
    - Only scraped posts.
    - Both.
- Users can delete their account, including all account data and posts from SketchApp database.

2.2 System Objectives

The follow is a list of system objectives:

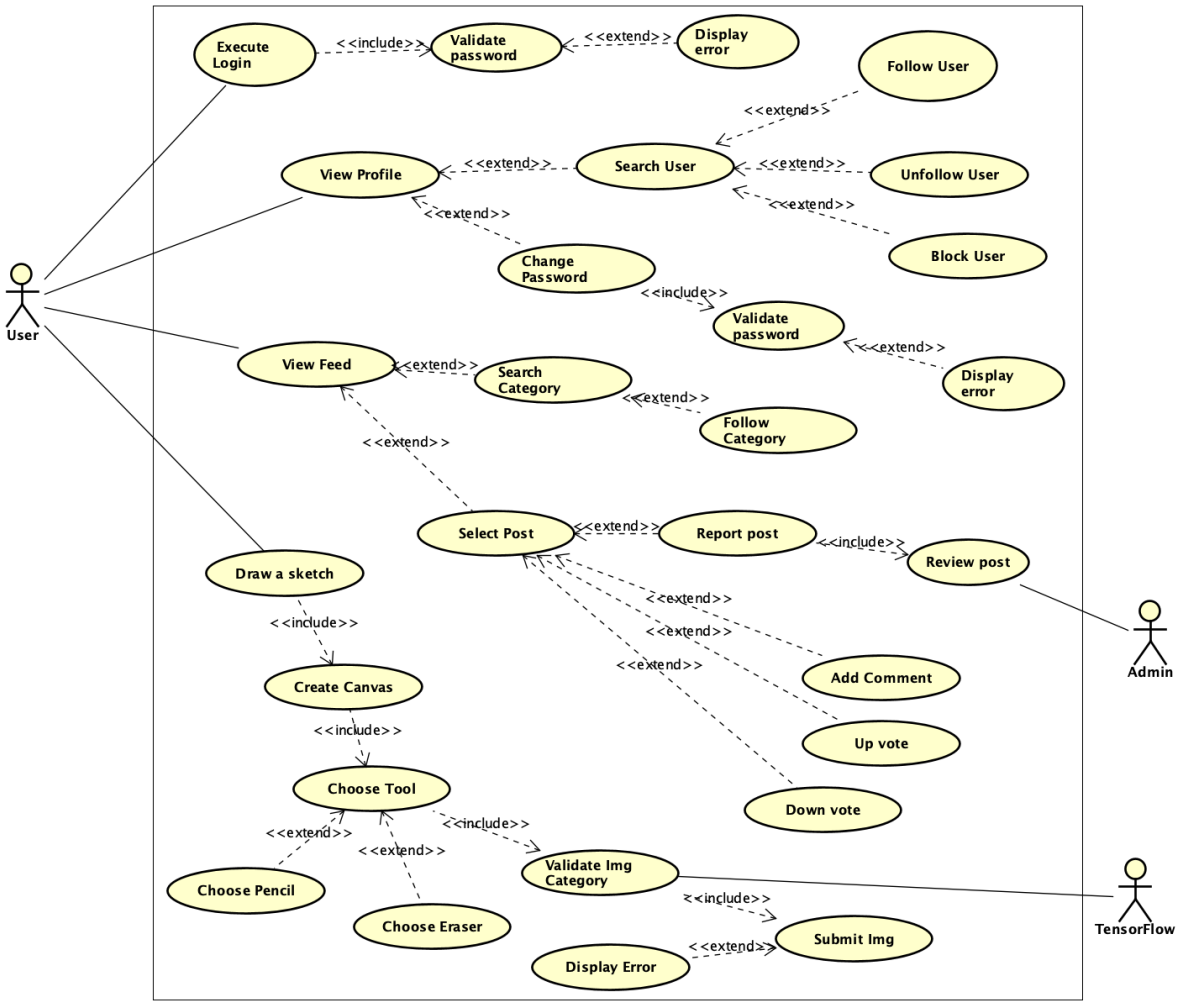
Objective 1: SketchApp will be an Android OS application.

Objective 2: Web scraping functionality will utilize Reddit for animal images.

Objective 3: M.L. will utilize Google Doodles data for training drawing images.

Objective 4: M.L. will use TensorFlow for Neural Network Implementation.

3. Project Context Diagram



4. Systems Requirements

4.0 Requirements Overview

The following requirement forms provide details about how each specific area of the application will accomplish its objective. The forms are grouped by areas of the application in which they operate. These subsystems are: Login, Using the Canvas, Drawing Categorization, Comments, Voting, and Reporting, Database Search, Following and Filtering, and Profile.

4.1 "Login" Requirements

Requirement title	Login
Sequence No.	1
Short description	How the system accepts login information
Description	The system will have two entry boxes, email/username, and the password. Each box will have a header of respective name i.e. Username and Password. Minimum of 8 entry is required on the password box.
Preconditions	The user will need to open the application for login page and needs to be connected to the internet.
Postconditions	Successful entry of username and password will trigger to the homepage of the application.
Other attributes	There will be a "login" button for user to submit his/her username and password.

4.2 "Using the Canvas" Requirements

Requirement title	Using the Canvas
Sequence No.	1
Short description	How the user interacts with the canvas interface and submits a drawing
Description	The Canvas interface will provide tools for the user to create a Drawing. The user will be able to select which brush and color to use and create strokes in the provided region. The user can reset his/her Drawing or submit it to the system for categorization.
Preconditions	The user must be logged in to a valid account before creating a Drawing.
Postconditions	The user must have a connection to the internet to submit a Drawing. The Drawing will then be categorized and stored in the database.
Other attributes	N/A

4.3 "Drawing Categorization" Requirements

Requirement title	Drawing Categorization
Sequence No.	1
Short description	How the user interacts with the canvas to draw the sketch.
Description	The user will have various tools for drawing. Also, there will be an option to upload sketch. User can save his/her sketch and continue later.
Preconditions	Drawing canvas will needed to be open to draw on it.
Postconditions	On completion of sketch user can share his/her sketch, save it or delete it.
Other attributes	N/A

4.4 "Comments, Voting, and Reporting" Requirements

Requirement title	
Sequence No.	
Short description	
Description	
Preconditions	
Postconditions	
Other attributes	

4.5 "Database search" Requirements

Requirement title	Database Search
Sequence No.	1
Short description	How the user can search for information in the database
Description	The server-side database will store all user Drawings and Profile information. Drawings can be queried by category or by the Profile that created them. Profiles can be found by username or an optionally associated personal name.
Preconditions	The user must have an internet connection to search the database.
Postconditions	Database search results will be sent to the client for use in filtering the user's feed or displaying search results from the Profile tab.
Other attributes	N/A

4.6 "FOLLOWING AND FILTERING" REQUIREMENTS

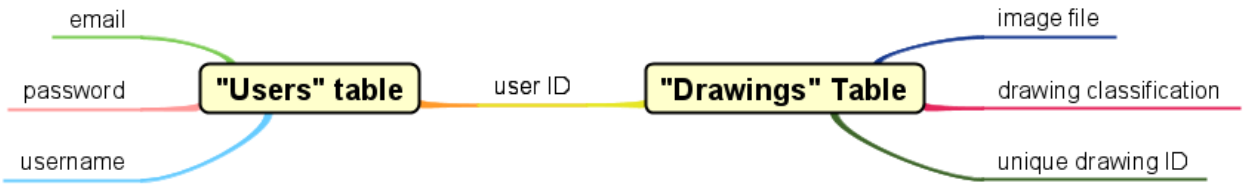
Requirement title	Following and Filtering
Sequence No.	6
Short description	Allow the user to customize their feed with following and filtering.
Description	The system will allow a user to follow another user by navigating to their profile and pressing follow. Once followed, that followed user's new content will appear on the feed of everyone following them in real time. In addition, the user will be able to filter their feed with keywords. The user can filter by category, for example, they can choose to only view posts of dogs, and their feed will update accordingly and only show posts in that category. If a user is following no one and no category is given, then random posts shall be shown.
Preconditions	Both users (following/followed) must have a valid account. Posts in the system should be logged into a category, either by the machine or by user input.
Postconditions	The user must have an active internet connection to get real time feed updates. The "following" status should stay on the relevant accounts until removed by the user, to ensure the user gets the proper feed.
Other attributes	The feed is subject to improvement. Currently, there is no plan for a method to choose the most relevant for our users, and so we rely on filtering and following to achieve this. In the future, we could implement a learning machine to understand the user's interests and customize their feed like many platforms do.

4.7 “PROFILE” REQUIREMENTS

Requirement title	User Profiles
Sequence No.	7
Short description	Unique user profiles for database storage.
Description	Each user will be required to create a profile before using the app. The user must provide a unique username. The username will be checked against all saved usernames in the database to ensure it is unique. The user must also provide a password. These are the base requirements, but users can also add/edit a bio as well as a profile picture. Each user will have a page for their profile, displaying their username at the top and their bio and profile picture (if they have one). A default profile picture will be used if the user does not provide one. On the users profile, their will be multiple tabs. One tab will be that user’s posts, and will display posts the user has made in chronological order with the most recent at the top. The user will also have a tab for liked content, in which posts the user has given a like to will be shown. Any user can see an other's profile by searching their username or by clicking on their username on a post they made or a comment they made on another post.
Preconditions	The database must be able to store profile information and must be able to retrieve profile information.
Postconditions	Posts must be linked to a profile so that they can be displayed in the appropriate profiles and so that users can find someone’s profile by seeing a post they made.
Other attributes	N/A

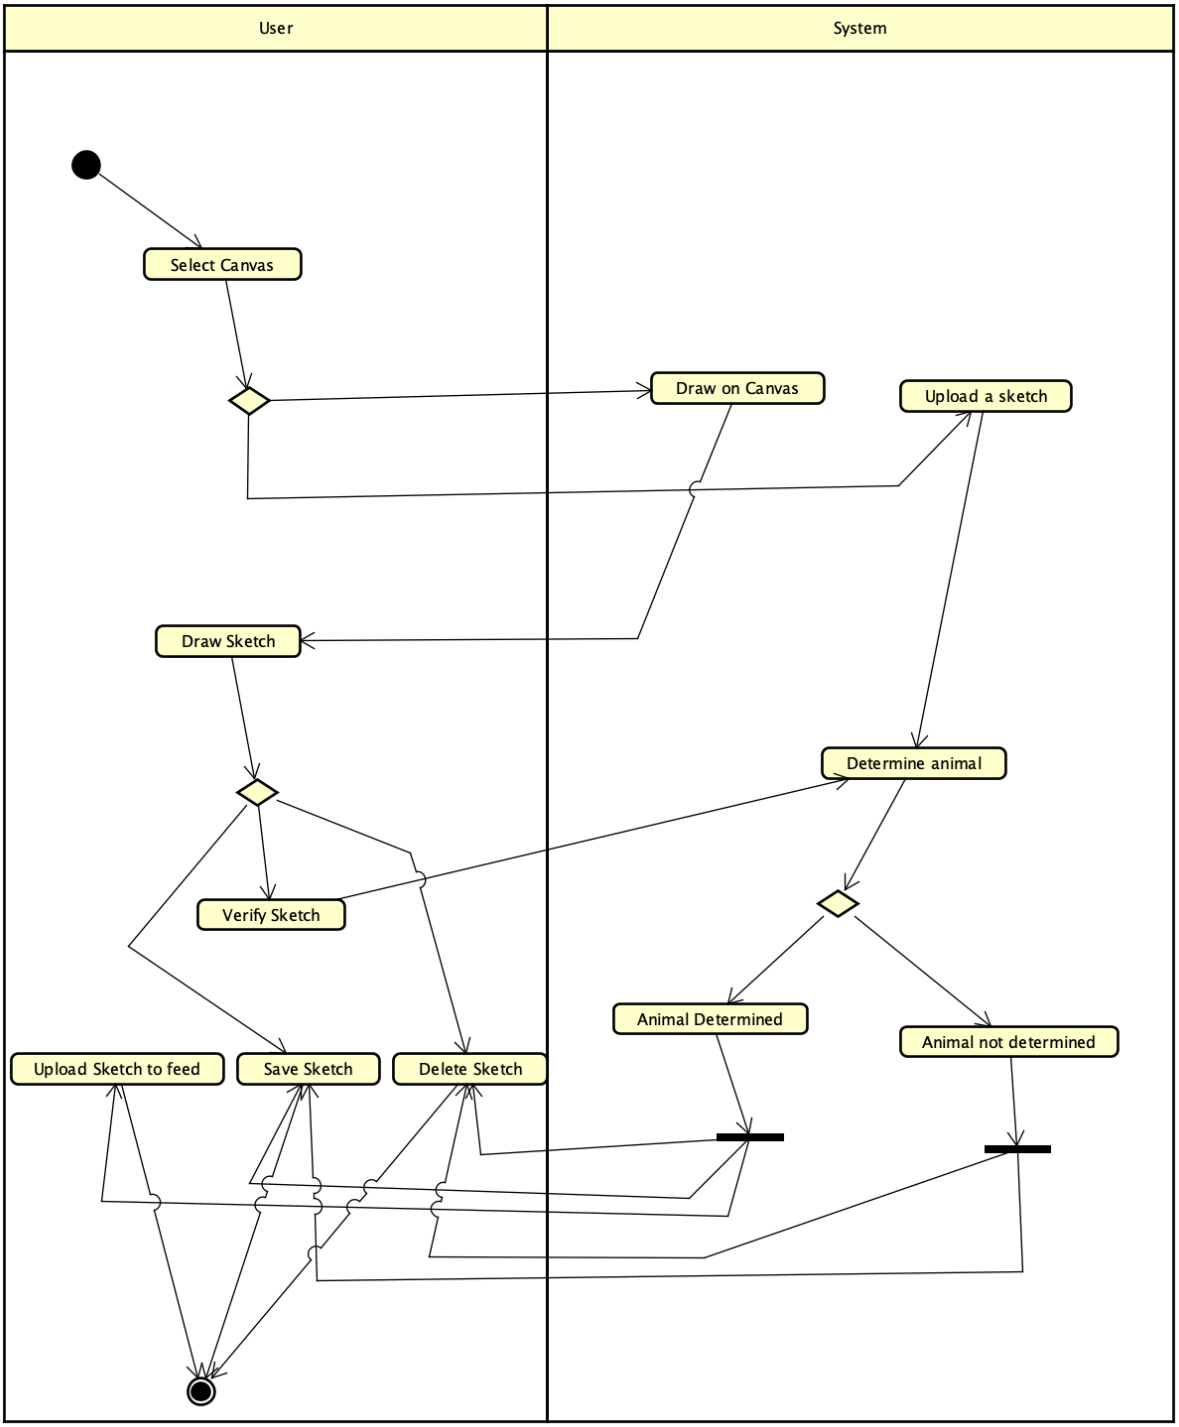
5. Software Processes and Infrastructure

5.1 Conceptual Data Model - Database

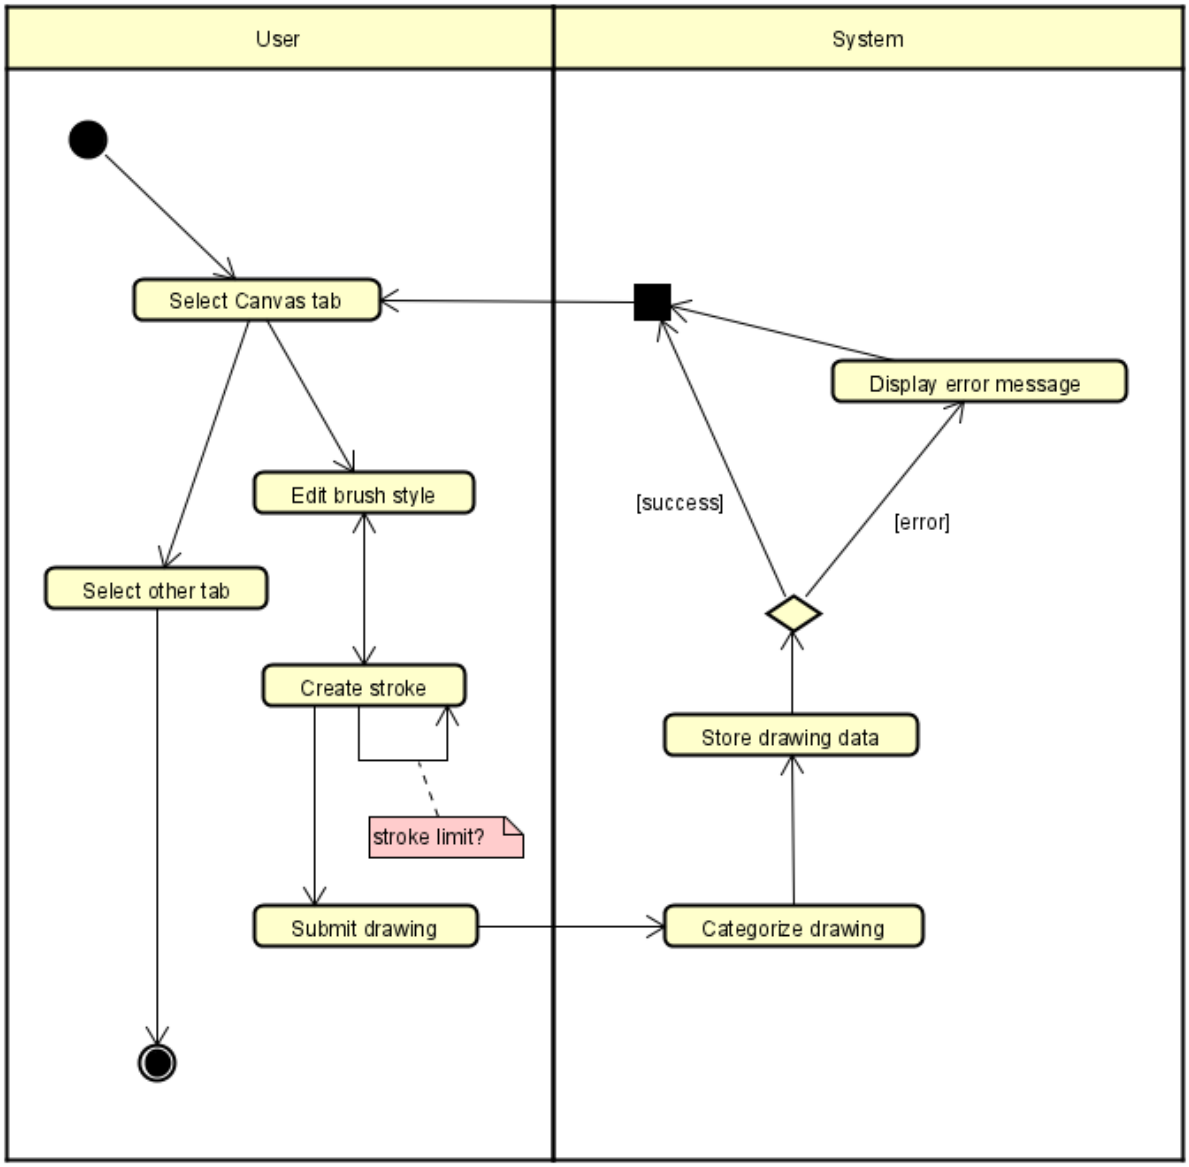


5.2 UML DIAGRAMS

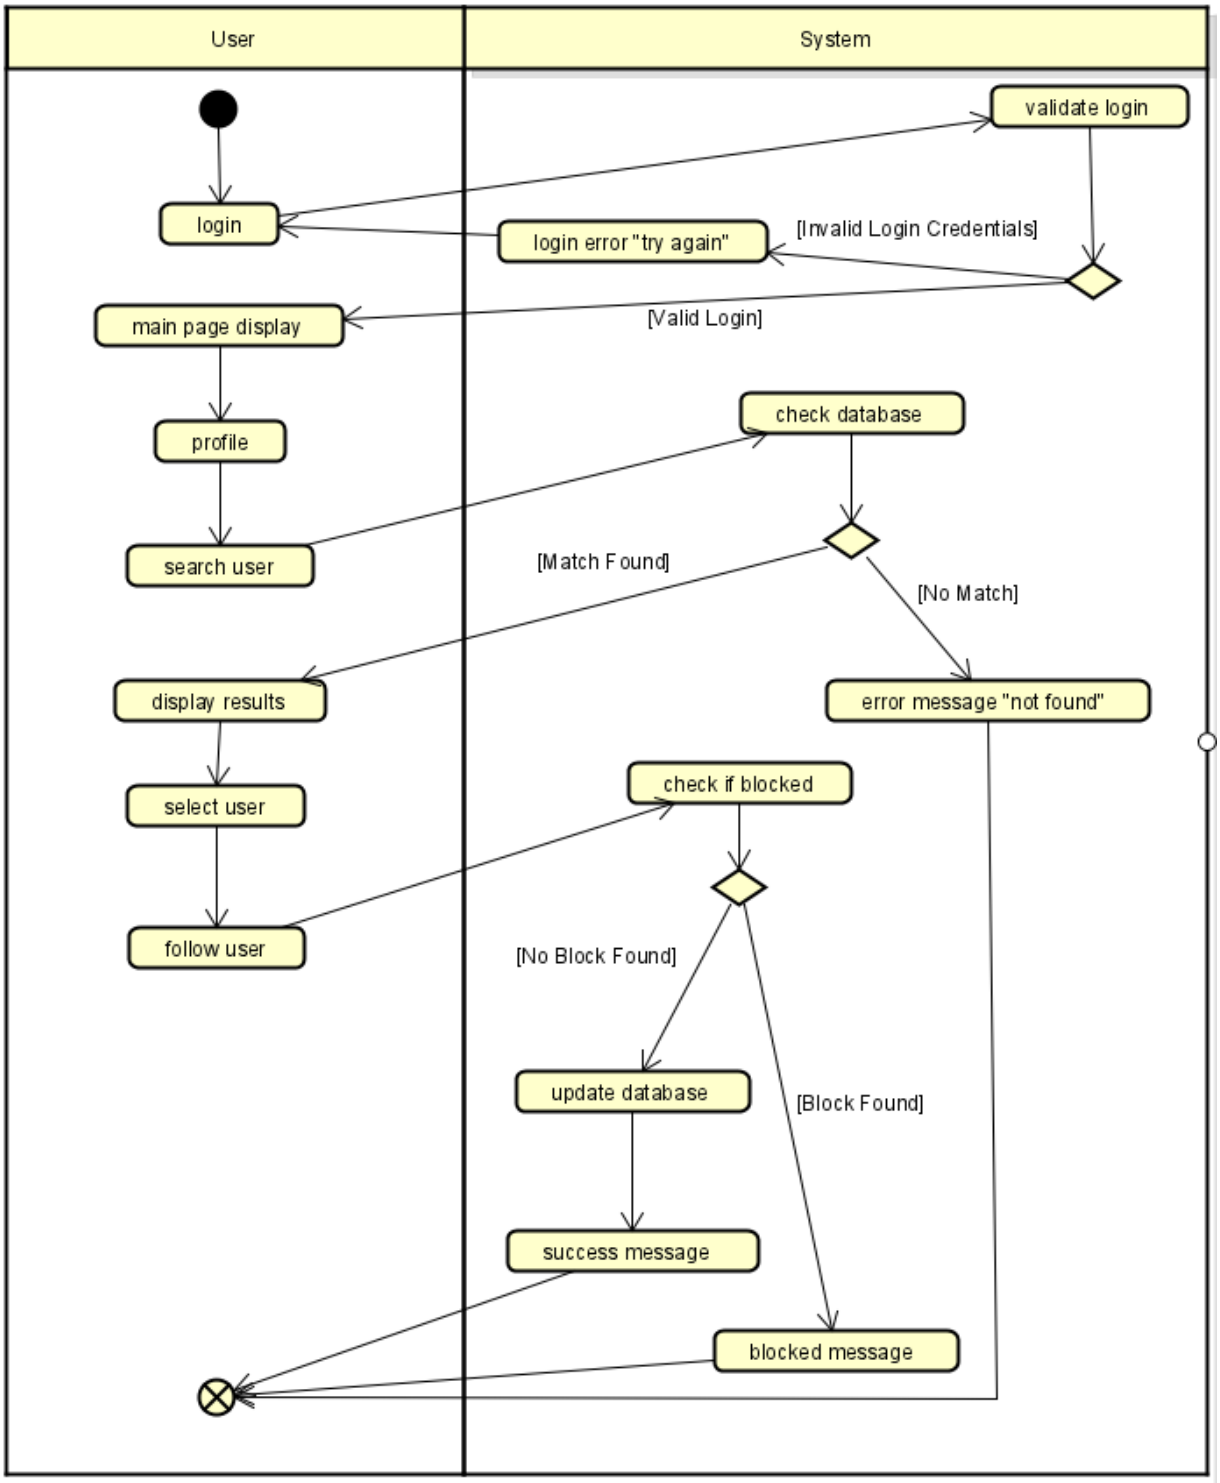
Activity Diagram: Drawing



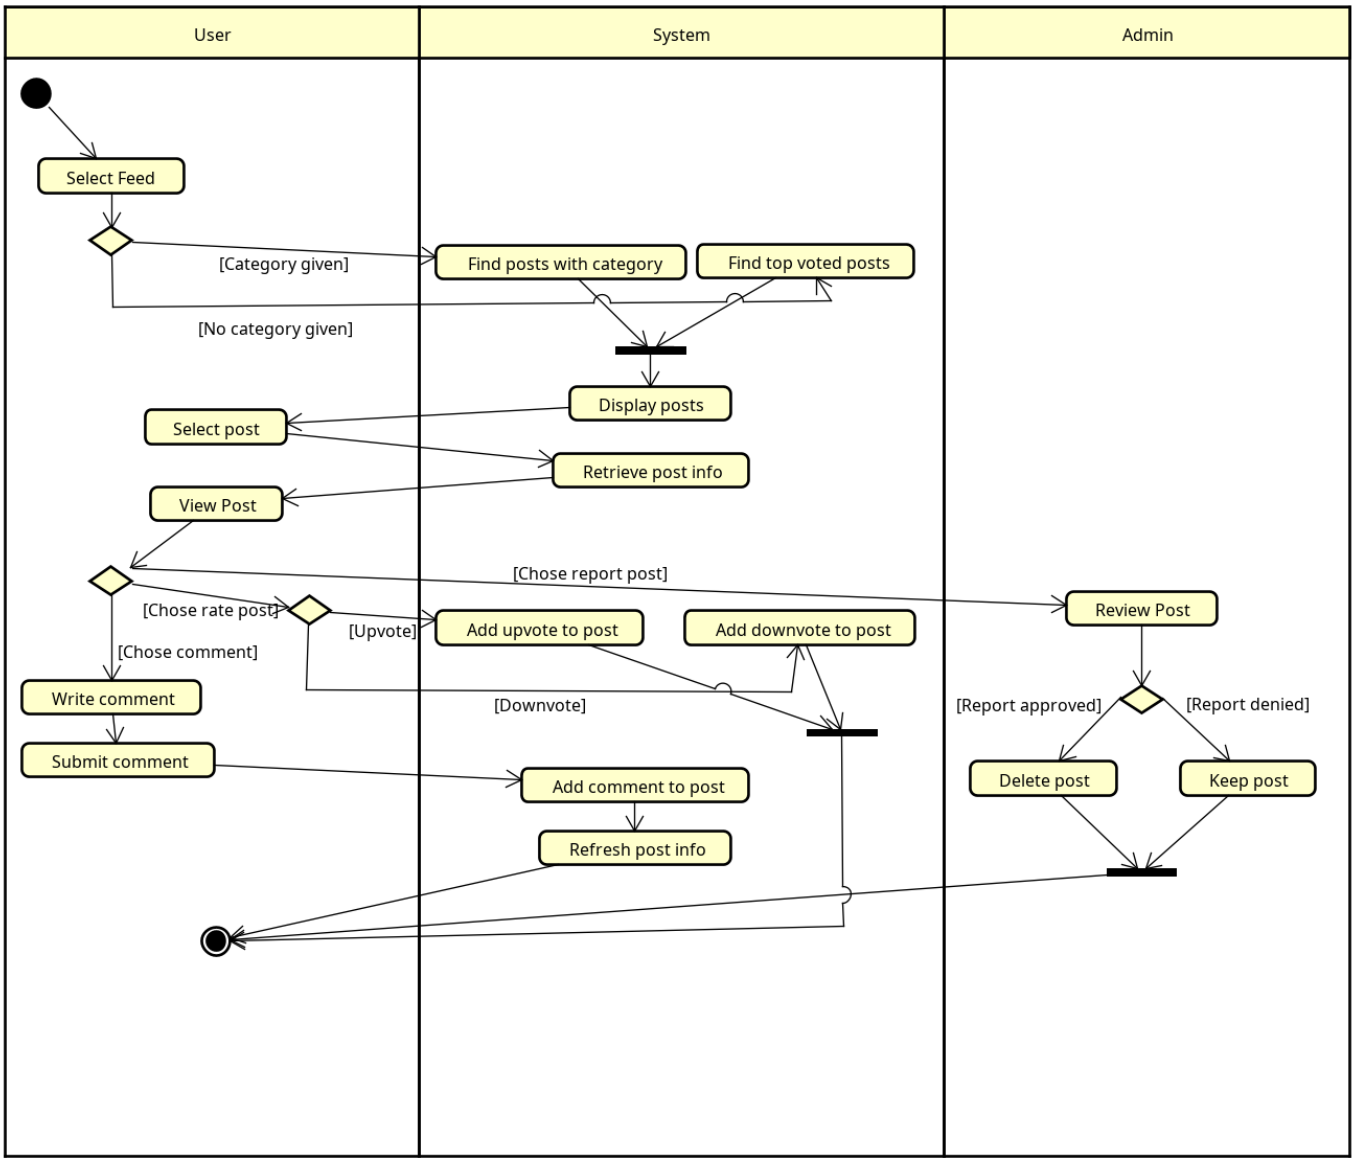
Activity Diagram: Canvas



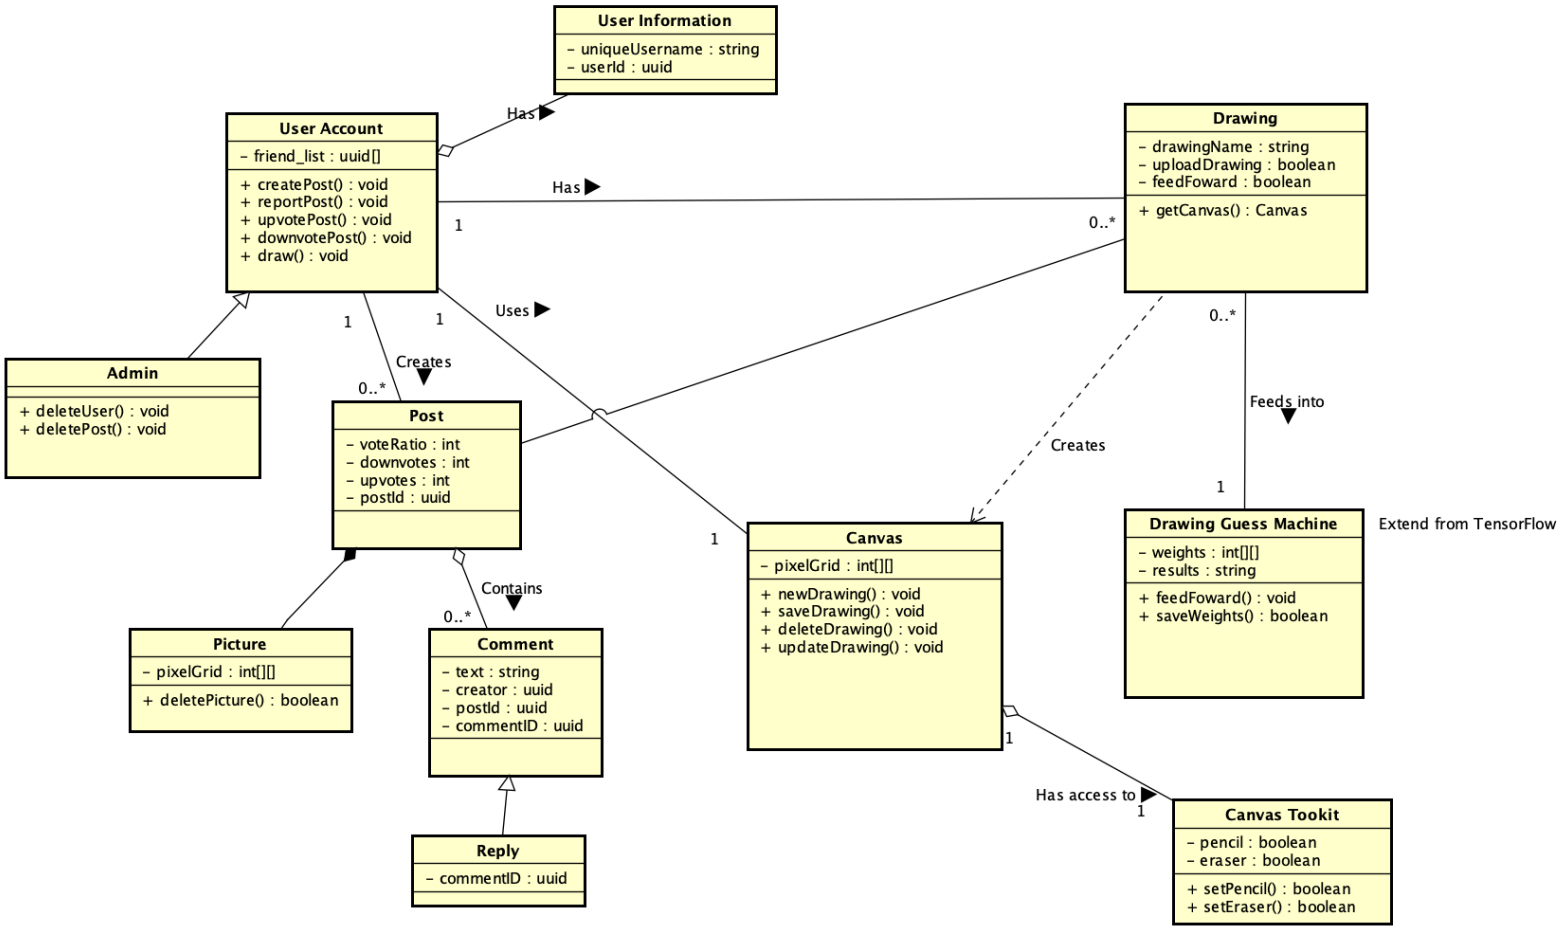
Activity Diagram: Login



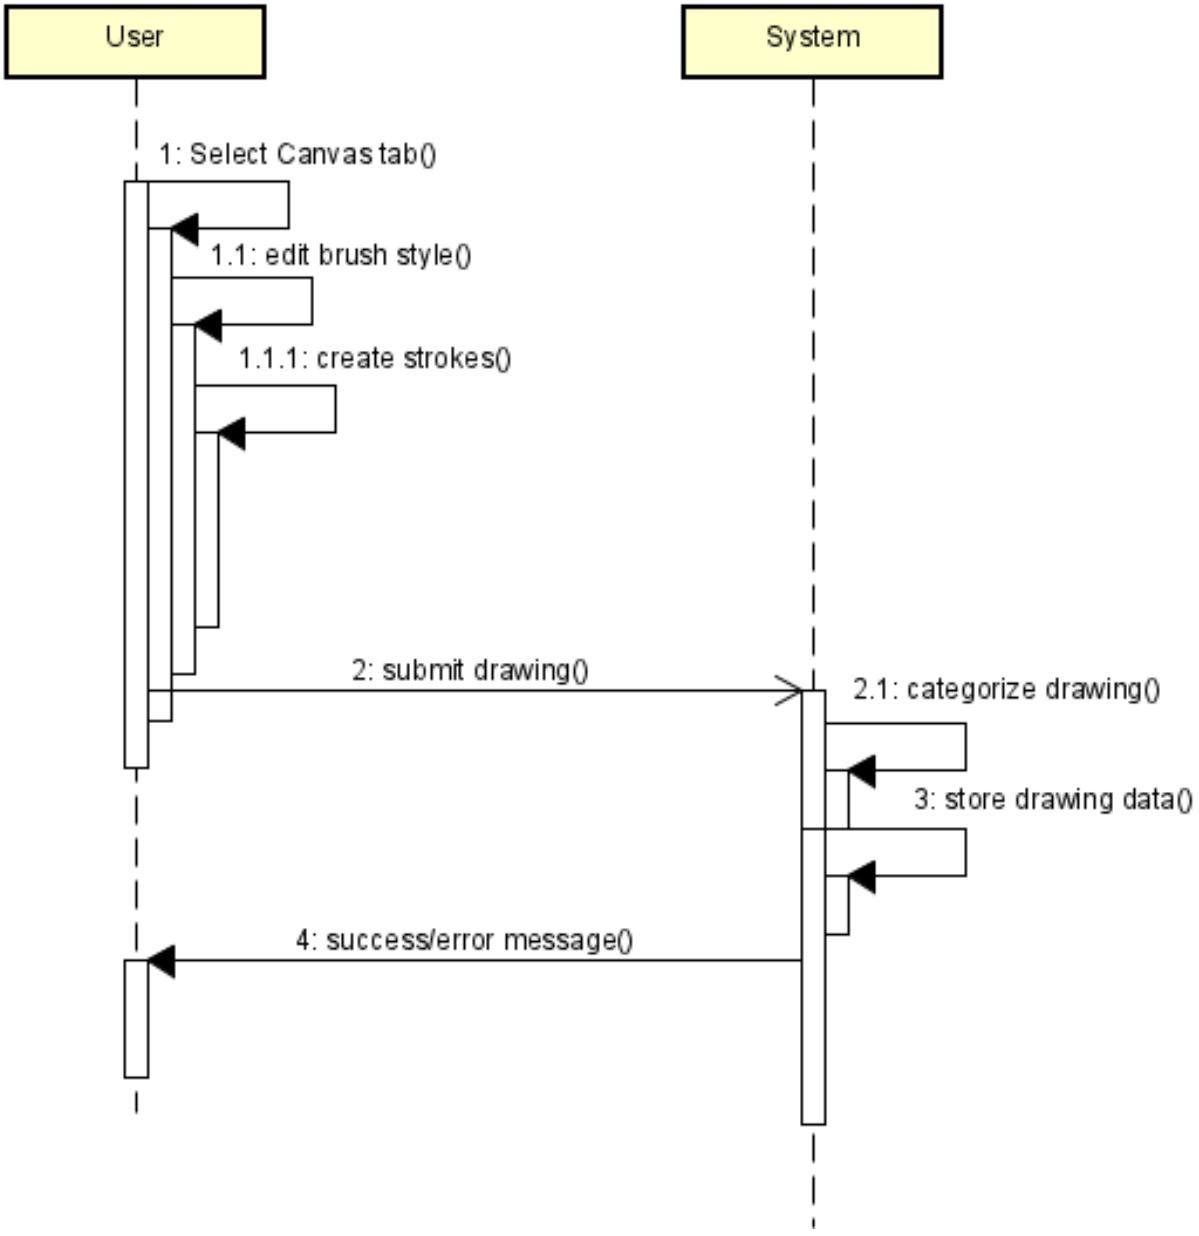
Activity Diagram: User Feed



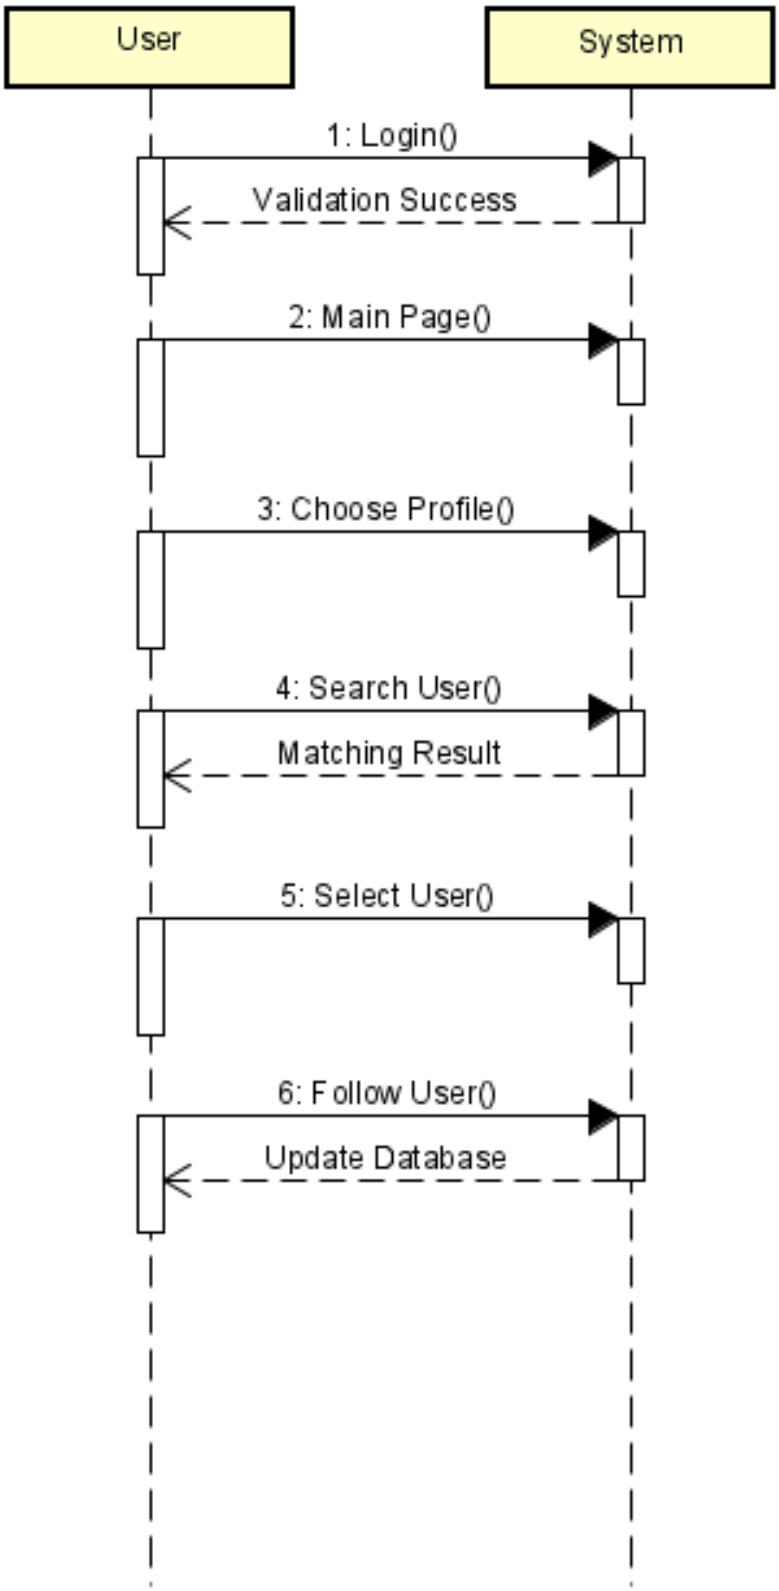
Class Diagram



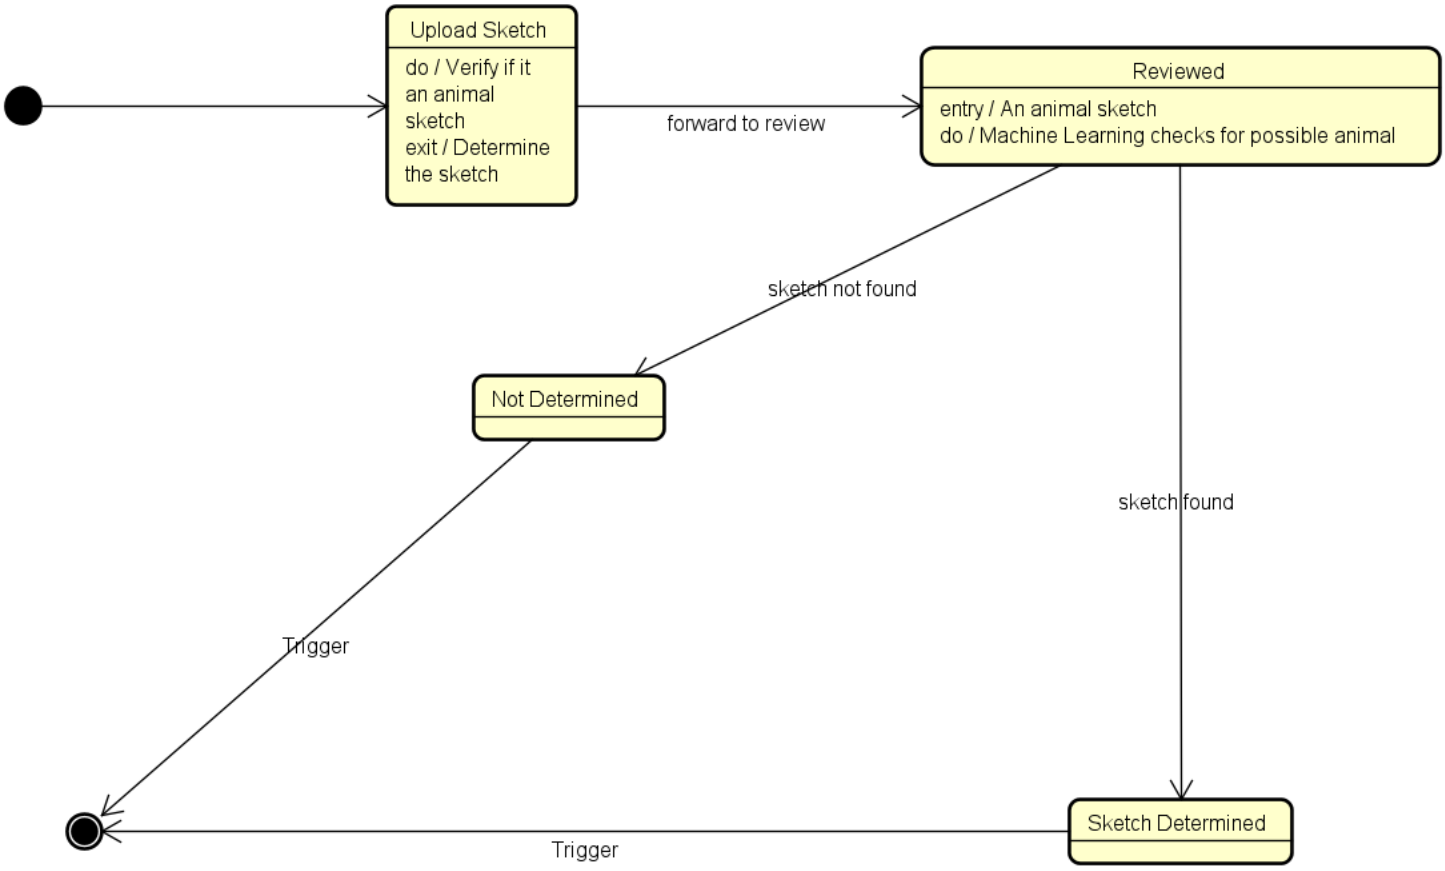
Sequence Diagram: Canvas



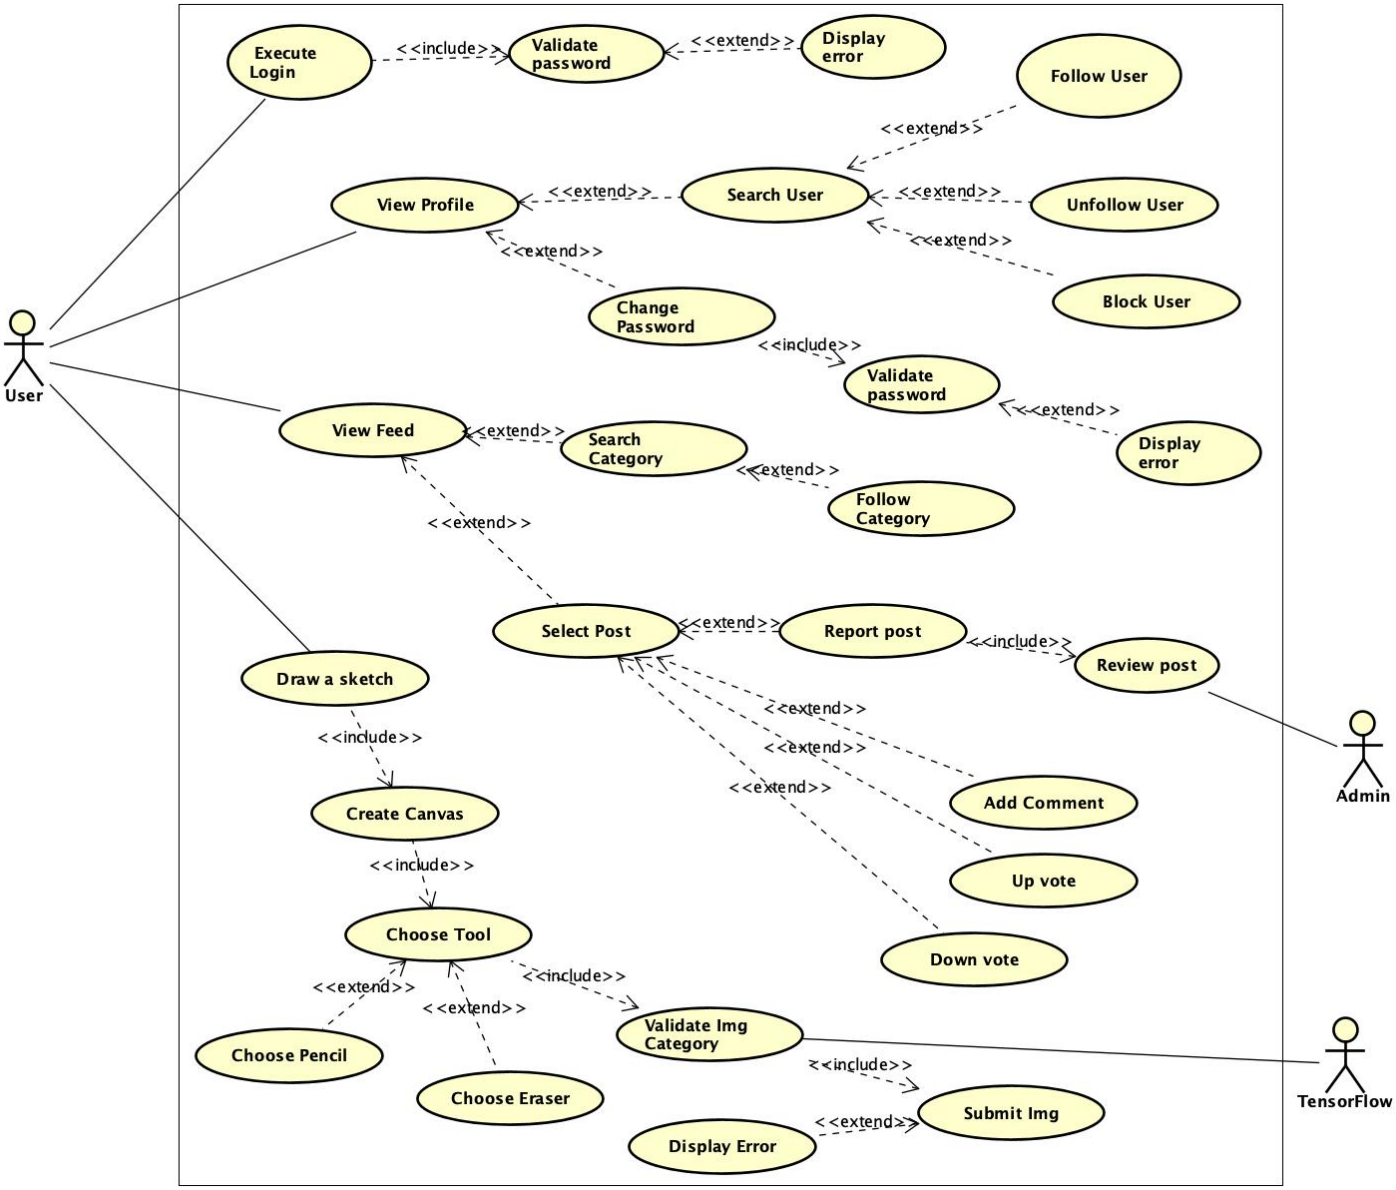
Sequence Diagram: Login



State Machine Diagram



Use Case Diagram



5.4 Screen Shots

None available at this time.

5.5 Test Plan

A test plan will be provided at a later stage of the project.

6. Assumptions and Constraints

6.1 ASSUMPTIONS

The following is a list of assumptions:

- All users are 13+ in age.
- The project will not need maintenance/ evolution after initial release.

6.2 CONSTRAINTS

The following is a list of constraints:

- Team does not have enough experience with database implementation.
- Team does not have enough experience with Machine Learning.

6.3 OUT OF SCOPE MATERIAL

The following is a list of “out of scope” material:

- Post Project activities are not covered.

7. Delivery and Schedule

{List all tasks/milestones from start of the project to the end with specific dates for both Anticipated Start & End Dates}

Task/Milestone Description	Anticipated Start Date	Anticipated End Date	Status	Comments
UML diagrams	9/1/2020	10/1/2020	Complete	
SRA document (Includes project objectives, Requirements and UML diagrams)	10/6/2020	10/22/2020	In Progress	Deliverable will be the SRA document. All stakeholders agree on the content of the SRA by signing in section 8. Increment 2 Deliverable

8. Stakeholder Approval Form

Stakeholder Name	Stakeholder Role	Stakeholder Comments	Stakeholder Approval Signature and Date
Rodrigo Augusto	Development Manager		
Prajwal Gautam	Project Assistant		
Gabriel de Sa	Developer		Gabriel de Sa 10/22/2020
Lucas Streanga	Developer		Lucas Streanga 10/22/2020
Luke Brown	Developer		Luke Brown 10/22/2020
